

### Illinois DSM Portfolio Non-Energy Impacts Economic Analysis

Commonwealth Edison and Ameren Illinois

# Economic Impact Methodology

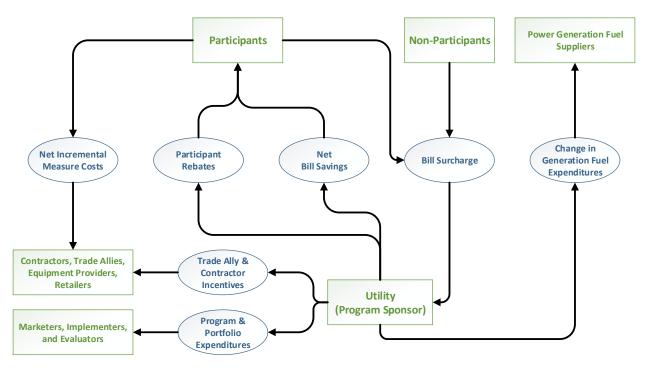

### **Overview of NEI Economic Impact Analysis**

- Objectives:
  - Assessment of economic impacts, including employment, from EE programs on the Illinois economy
  - Assessment of the statewide impacts from utility programs on Illinois
  - To the degree possible, assessment of localized impacts of Illinois EE programs
- Economic Impacts (including job creation) are only part of the overall impact that EE programs have on the State of Illinois and utility customers participants and non-participants. This analysis is specific to the economic aspects of EE programs and does not encompass societal impacts or utility-specific financial metrics (benefit-cost metrics). This analysis strictly provides insight into the effects that EE programs have on the Illinois economy.
- Analysis is based on the portfolio of programs implemented during the 2018 calendar year with impacts occurring over the life of each measure – up to 25 years. All impacts are based on the Net Present Value of those impacts.

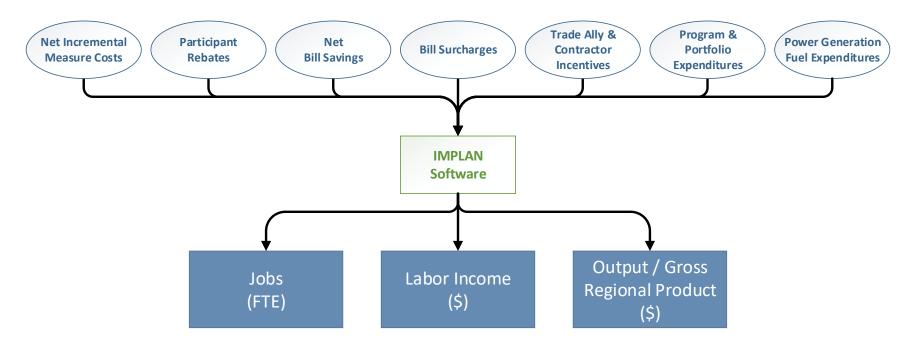

### **Overview of NEI Economic Impact Analysis**

- Comprehensive approach to the economic transactions throughout the lifecycle of EE programs
- Includes positive economic impacts (e.g., Net Bill Savings) and negative economic impacts (e.g., Bill Surcharge)
- Economic impacts are associated with the applicable industry classification

### **Economic Impact Assessment Methodology – Overview**

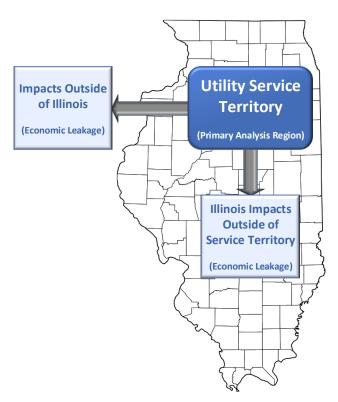

#### Three Step Process:

- 1. Data Collection Economic activities of EE programs
- 2. Modeling IMPLAN Software
- 3. Analysis of Output Summarize and assess IMPLAN model output (Jobs, Labor Income, Output)

# **Economic Impact Assessment Methodology Geography of Impacts**

- For utility EE programs, economic impacts occur in one of three locations:
  - 1. Within the utility's service territory
  - 2. Outside the utility's service territory but within Illinois
  - 3. Outside of Illinois
- Analysis implements a Multi-Regional Input-Output (MRIO) within IMPLAN to estimate impacts that happen within the utility service territory (#1) and elsewhere in Illinois (#2).
- The MRIO approach simplifies the aggregation of impacts across utilities within Illinois by standardizing the defined geographies
- A portion of the total economic impacts happen outside of Illinois, but are not explicitly estimated within the modeling framework due to the additional costs for economic data covering regions outside of Illinois
- Approaches for estimating impacts at the community level have been explored, but would require localized inputs that go far beyond the level of detail that is required for other analysis. It is also more expensive to acquire the underlying economic data for more granular regions. Due to these factors, it is not feasible within the current scope.

### **Economic Impact Assessment Methodology – IMPLAN**

IMPLAN is a regional economic analysis software application that is designed to estimate the impact or ripple effect (specifically backward linkages) of a given economic activity within a specific geographic area through the implementation of its Input-Output (I-O) model. The following are assumptions within any I-O Model:

- · Constant returns to scale
- No supply constraints
- Fixed input structure
- Industry technology assumption
- Constant byproducts coefficients
- The model is static

By design, the following key limitations apply to Input-Output Models, such as IMPLAN, and should be considered:

- **Feasibility:** The assumption that there are no supply constraints and there is fixed input structure means that even if input resources required are scarce, IMPLAN will assume it will still only require the same portion of production value to acquire that input, unless otherwise specified. The assumption of no supply constraints also applies to human resources, so there is assumed to be no constraint on the talent pool from which a business or organization can draw.
- Backward-linked and Static model: I-O models do not account for forward linkages, nor do I-O models account for
  offsetting effects such as cannibalization of other existing businesses, diverting funds used from other potential or existing
  projects.
- Like the model, prices are also static: Price changes cannot be modeled an I-O model directly; instead, the final demand effects of a price change must be estimated before modeling them in IMPLAN to estimate the additional economic impacts of such changes.

# **Economic Impact Assessment Methodology Modeling Approach**

Each category of economic impact has been aligned with the sectors of the economy that most closely align with them.

### **Household Impacts**

All households with representative weighting applied to each income level

#### **Income Qualified Impacts**

Households with an annual income less than \$50k

### **Business Impacts**

All businesses – excluding utilities – weighted by economic output within utility territory

### **Net Incremental Measure Cost Impacts**

Retailers of Building Materials and Appliances

### **Utility Impacts**

- Power Generation Fuel Procurement for Electric Utilities
- Natural Gas Supply Procurement for Gas Utilities

# Findings

| Impact Category   | Amount    | Impacted Segments |   |                         |
|---|-----------|-------------------|---|-------------------------|
| Residential Bill Savings  | \$514.0 M | +                 | Households                                |                         |
| Income Eligible Bill Savings                                      | \$83.3 M  | +                 | Income Eligible Households                |                         |
| Business Bill Savings   | \$921.2 M | +                 | Businesses                                |                         |
| Lost Electric Utility Fuel Expenditures                           | \$101.7 M |                   | Fossil Fuel Production and Transportation |                         |
| Lost Gas Utility Fuel Expenditures                                | -\$2.9 M  |                   | Natural Gas Production and Transportation |                         |
| Residential Incentives and Rebates                                | \$58.5 M  | 4                 | Households                                |                         |
| Income Eligible Incentives and Rebates                            | \$20.8 M  | +                 | Income Eligible Households                |                         |
| Business Incentives and Rebates                                   | \$126.6 M | +                 | Businesses                                |                         |
| Residential Net Incremental Measure Costs                         | \$77.6 M  |                   | Households                                | Retailers and Suppliers |
| Income Eligible Net Incremental Measure Costs                     | \$23.9 M  |                   | Income Eligible Households                | Retailers and Suppliers |
| Business Net Incremental Measure Costs                            | \$394.5 M |                   | Businesses                                | Retailers and Suppliers |
| Residential Program Administration Costs                          | \$29.7 M  | +                 | Electric Utilities                        |                         |
| Income Eligible Program Administration Costs                      | \$11.8 M  | +                 | Electric Utilities                        |                         |
| Business Program Administration Costs                             | \$46.9 M  | +                 | Electric Utilities                        |                         |
| Residential and Income-Eligible Program Funding (Bill Surcharges) | \$120.8 M | _                 | All Households                            |                         |
| Business Program Funding (Bill Surcharges)                        | \$173.5 M |                   | Businesses                                |                         |

| Impact Category | <b>Utility Territory</b> | Rest of State | Statewide Total |
|-----------------|--------------------------|---------------|-----------------|
| Jobs Created    | 14,635 Jobs              | 71 Jobs       | 14,707 Jobs     |
| Labor Income    | \$872.3 M                | \$3.6 M       | \$875.9 M       |
| Economic Output | \$2,927.9 M              | \$16.2 M      | \$2,944.1 M     |

- Shift from capital-intensive industries and imported commodities (e.g., Fossil Fuel Production) to labor-intensive industries (e.g., Retail) leading to an increased number of jobs and labor income.
- Households in the ComEd territory are <u>less</u> economically connected with the rest of the state than the utilities that serve them (electric, gas, and water), but have a similarly strong spending pattern in their local economy.
- The magnitude of lighting programs within ComEd's portfolio has led to additional natural gas consumption. This increases natural gas consumption – which contributes more to economic output due to the localized capital-intensive nature of utilities.
- Reduced incremental power generation results in fewer imports of fossil fuels from other states.
- Note: The number of jobs created are job-years and not permanent jobs. The portfolio's
  economic impacts could support the total number of jobs created for one year or a lower
  number of jobs over an extended period of time.

| Jobs Created | <b>Utility Territory</b> | Rest of State | Statewide Total |
|--------------|--------------------------|---------------|-----------------|
| Direct       | 5,562 Jobs               | 0 Jobs        | 5,562 Jobs      |
| Indirect     | 2,203 Jobs               | 38 Jobs       | 2,241 Jobs      |
| Induced      | 6,870 Jobs               | 33 Jobs       | 6,904 Jobs      |

| Business Program Funding (Bill Surcharges)                        | \$58.4 M  |                   | Businesses                                |                         |

## Summary of Input Data for Economic Impacts – Ameren Illinois

| Impact Category        | <b>Utility Territory</b> | <b>Rest of State</b> | Statewide Total |
|------------------------|--------------------------|----------------------|-----------------|
| Jobs Created           | 3,064 Jobs               | 249 Jobs             | 3,313 Jobs      |
| Labor Income           | \$137.9 M                | \$18.0 M             | \$156.0 M       |
| <b>Economic Output</b> | \$601.4 M                | \$48.6 M             | \$650.1 M       |

- Shift from capital-intensive industries and imported commodities (e.g., Fossil Fuel Production) to labor-intensive industries (e.g., Retail) leading to an increased number of jobs and labor income.
- Households in the Ameren Illinois territory are more economically connected with the rest of the state than the utilities that serve them (electric, gas, and water).
- Households in the Ameren Illinois territory spend a lower portion of their money within Illinois than their utilities. This is primarily due to the proximity of Ameren's territory to a number of major cities located near the Illinois state line, but in adjacent states. This leads households to spend a higher portion of their expenditures outside of Illinois.
- Note: The number of jobs created are job-years and not permanent jobs. The
  portfolio's economic impacts could support the total number of jobs created for one
  year or a lower number of jobs over an extended period of time.

# **Summary of Input Data for Economic Impacts – Ameren Illinois**

| Jobs Created | <b>Utility Territory</b> | <b>Rest of State</b> | <b>Statewide Total</b> |
